

Create some coded messages with Thymio!
Morse code associates every letter with different short and long sounds. Here, we will use a simplified version with three sounds. We will also associate half of the alphabet with high pitch sounds and the other half with low pitch ones. You will see a match between letters and the black and white notes in VPL below. You will also find some examples. Have fun!

Crée des messages codés avec Thymio! Le code Morse associe jusqu'à 4 sons courts ou longs à des lettres. Ici, nous allons simplifier la chose et ne mettre que 3 sons au maximum. Nous avons associé la moitié de l'alphabet à des notes hautes et l'autre moitié à des notes basses. En-dessous, tu verras la correspondance entre les lettres et les notes noires et blanches de VPL. Tu trouveras aussi quelques exemples. Amuse-toi bien!

Don't forget to let an empty space between each notes so that you will hear them better!

N'oublie pas de laisser un espace vide entre chaque note pour mieux les entendre !
